### FOLD-DOWN SIDE RAILS

The foldable guardrail can prevent the patient from falling off the stretcher and causing secondary injury.

### STRETCHER SURFACE SEPARATION

By pulling the handle, the bottom stretcher surface and the base can be separated to facilitate patient transfer.

### LEGS RETRACTED

When pushing the stretcher to the ambulance, you can press the handle of the head to help retract the legs, which is quick and convenient to transfer the patient to the ambulance.

### KNEE GATCH POSITIONING

The legs can be adjusted to different positions through this handle, which can quickly achieve knee gatch positioning.

### BACK ADJUST

The back is controlled by a gas spring, and the back can be adjusted to the desired angle by just pressing lightly.

### FIXING DEVICE

Each ambulance transporter comes with a fixing device that can be attached to the ambulance to prevent slipping.

### AUXILIARY WHEEL

There are spare wheels on the four corners of the stretcher, which can be moved by the wheels even after the stretcher is pushed onto the ambulance, which saves effort.
